Abstract—The objectives of research was to design a digital service supply chain model for ASEAN **University Network Quality Assurance at institutional** level and to assess a appropriate of a digital service supply chain model. The sample group consisted of fifteen experts in the field of information system supply chain and research. The data is analyzed by means and standardized deviations statistically. The research result shows that a digital service supply chain model for ASEAN University Network Quality Assurance at institutional level is consisted of 8 key elements which are 1) main elements 2) suppliers /services 3) university 4) customers 5) consumer 6 Satisfaction 7 Feedback. The results from fifteen expert a digital service supply chain model for ASEAN University Network Quality Assurance at institutional level which mean that It could be used to service digital quality assurance for ASEAN University Network Quality Assurance.

Keywords— A digital service supply chain model, ASEAN University Network Quality Assurance at institution level.

1. Introduction

Service in the University in Thailand is to leverage its knowledge and expertise to create new value for through collaboration and society societal commitment the University in Thailand have different experiences from collaborations with industry and government agencies and institutions contribute to realising this ambition, among other things through a strong commitment to providing consultancy services. In order to develop university in Thailand have jointly prepared general framework for the quality assurance of university in Thailand research-based consultancy services. It is based on the experience, procedures and paradigms which already exist at departments which have been involved in research-based consultancy. The description of a general quality assurance system at faculty level is to establish a common framework and ensure learning and improvements across departments and faculties in the University in Thailand The quality assurance system builds on in university [10].Researchers have given the importance to service due to increasingly high competitions from both within and outside the country. In order to be highly competitive, organizations in the sector need to have personnel with knowledge, ability and skills who can work efficiently to increase output and products. The organizations, therefore, need to have sufficient information and resources to increase their values and respond to the demand of their clients. Thus, the supply chain management process is a key process to support the organization's whole activities system from upstream to downstream. It enables the organization to promptly check digital system to ensure that the organization operates smoothly and effectively based on the determined strategies. Based on this realization,[1] the researcher has decided to design and to assess a digital service supply chain model for ASEAN University Network Quality Assurance at institutional level for application to increase values of society.

2. Related Literature

The service supply chain handles the supply of service parts, materials, people, and services required for efficient service delivery that maximizes equipment utilization and asset uptime.

A service supply chain in digital is the part of the supply chain dedicated to providing service on products. It addresses the supply of parts, materials, personnel and services needed to provide timely and effective product service,

The service supply chain in digital involves the logistics required to return a product for repair, servicing, replacement or recycling, a process called reverse logistics. Many manufacturers often turn to third-party logistics providers to manage part of the service supply chain. A service chain in digital focuses more on the "chain" of services themselves and the people who provide those services, in addition to the physical side. It is analogous to supply chain management, but instead of finished goods, it involves the flow of services to the customer.[8]

3. Research Methodology

3.1, Relevant papers and research works are studied, analysed, and synthesized to Formulate a concept of the model development.

- 3.2, The model is developed based on the data obtained from the research study used in the formulation of the model development concept.
- 3.3, The model is presented to thesis advisor for consideration and modified it as guided.
- 3.4, Create a tool for assessing the model suitability.
- 3.5, The model is submitted to the experts for review and evaluate the suitability
- 3.6, The model is modified according to the experts' suggestions.
- 3.7, Analyze the output data by using appropriateness measurement scale based on 5-point Likert Scale

4. Results

4.1 Research results about a digital service supply chain model for ASEAN University Network Quality Assurance at institutional level were presented in figure 1.

4.2 Explanation on elements of a digital service supply chain model for ASEAN University Network Quality Assurance at institutional level

1 Suppliers /services

A supplier is a person or business that provides a product or service to another entity. The role of a supplier in a business is to provide high-quality products from a manufacturer at a good price to a distributor or retailer for resale. A supplier in a business is someone who acts as an intermediary between the manufacturer and retailer, ensuring that communication is forthcoming and stock is of sufficient quality.

2 University

A service provider is a university or manufacturer It performs the duty to transform raw materials into the finished products. A service provider will perform its duty of product development and assessment .It is based on the consideration that all supply chain tasks and activities.

3 Customer

Customers mean finished product from the university

4. Consumers

The customers mean entrepreneurs or the end-of-process component of the model. They include the society in general and entrepreneurs who sended finished product from the university. Finally, the end product of product will add value for customers with supply chain.[1],[2],[3],[4],[5],[6].

5. Satisfaction

Satisfaction levels of stakeholders are established, monitored .

6 Feedback

Feedback is the data obtained from satisfaction analysis with the relationship between finished product and customers.

Table 2: Results of appropriateness evaluation of a digital service supply chain model for ASEAN University Network Quality Assurance at institutional level

| No. | Items | \overline{X} | S.D. | Suitability |
|-----|------------------------|----------------|------|-------------|
| 1 | Main elements | 3.56 | 0.81 | High |
| 2 | Suppliers /services | 3.63 | 0.70 | High |
| 4 | University | 3.66 | 0.48 | High |
| 5 | Customers | 3.53 | 3.53 | High |
| 6 | Consumers | 3.60 | 0.73 | High |
| 7 | Satisfaction | 3.53 | 3.53 | High |
| 8 | Feedback | 3.60 | 0.73 | High |
| | Total | 3.58 | 1.50 | High |

From table 2, that fifteen experts agree that a digital service supply chain model for ASEAN University Network Quality Assurance at institutional level is highly appropriate ($\overline{X} = 3.58$, S.D. = 1.50).

5. Discussion

According to evaluation by experts, the a digital service supply chain model for ASEAN University Network Quality Assurance at institutional level is considered to be high appropriate (\overline{X} = 3.58, S.D. = 1.50), and the design was corresponds to the research of Chansamut and Piriyasurawong has studied supply chain and information system about educational [1],[3],[4],[5],[6] In addition, with the study of Kaewngam, Chatwattans and Piriyasurawong [9] suggesting that supply chain and digital also.

6. Conclusion

A digital service supply chain model for ASEAN University Network Quality Assurance at institutional level is considered to be high appropriate ($\overline{X} = 3.58$, S.D. = 1.50) which mean that It could be used to service digital quality assurance for ASEAN University Network Quality Assurance.

7. Recommendations

There should be case studies of higher education institutions that develop the pattern effectively, if any

8. Acknowledgements

The research is helped by expert from university in Thailand.
