Abstract— The research title The service agile supply chain information system model for ASEAN University Network Quality Assurance at institution level. The objectives of research to study the model and to study method including, to assess The service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level. A sample group consisted of ten in field of 5 expert in supply chain ,two expert in information system and three experts in the field Quality Assurance . All totalling ten experts. The research tool was questionnaire about The service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level. The findings reveal that The service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level is consisted of five key elements which are 1) main elements 2) suppliers /services 3) university 4) customers 5) consumer. development process has 5 components that This model develop to information system .As the overall model was shown at a very good level, the experts agreed.

**Keywords**— The service agile Supply chain . information system model, ASEAN University Network Quality Assurance at institution level

#### 1. Introduction

Service in the University in Thailand is to leverage its knowledge and expertise to create new value for society through collaboration and societal commitment the University in Thailand have different experiences from collaborations with industry and government agencies and institutions contribute to realising this ambition, among other things through a strong commitment to providing consultancy services. In order to develop university Thailand have jointly prepared general framework for the quality assurance of University in Thailand research-based consultancy services. It is based on the experience, procedures and paradigms which already exist at departments which have been involved in research-based consultancy. The description of a general quality assurance system at faculty level is to establish a common framework and ensure learning and improvements across departments and faculties in the University in Thailand The quality assurance system builds on in university practices [12]. The awareness of an agile supply chain information system model for quality assurance can be practical as a method to accomplish work procedures, actions and affairs within the organization. Agility is the ability of a supply chain to respond quickly to changing market and customer demands and is considered a competitive advantage in today's business world. The need for agility has traditionally been associated with supply chains in high-tech industry products. However, traditional industries face similar challenges in terms of speed, flexibility, increased diversity and product customization. Due to the uncertainties arising from a turbulent and dynamic market and the competitive forces of competition, an organization needs agility in its supply chain as a competitive advantage, providing a high capacity to respond to the needs of consumers. Product and technology lifecycles are getting shorter, competitive pressures are forcing more frequent product changes, and consumers are demanding more variety than ever before. To respond to this challenge, organizations must focus their efforts on achieving greater agility that can respond in shorter timeframes, both in terms of volume and variety of changes. For a truly agile business, the organizational structure, internal and external processes with partners in the supply chain must be ready to meet any demands placed on it. Based on this realization,[11] thus the researchers had an idea to study the model and to study the method including, to assess The service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level for adding values to consumer.

#### 2 Related Literature

An information systems in agile supply chains for ASEAN University Network Quality Assurance at institution level applies the concept of mass customisation to information systems. In agile supply chains, it must be possible to easily connect and disconnect information systems needed to

achieve a specific value proposition. It must be possible to design and instantiate new or adjusted supply chain configurations rapidly. The main challenge in achieving is to combine flexible customization with efficient.[9] [10]

Agility in university is a concept. It means that university have a ability to respond quickly, adapt to their environment, and maintain momentum while doing so. One area where agility is particularly important is in the supply chain. Agile supply chains rely on real-time data to help make decisions in day-to-day operations, as well as projected data in supply forecasts. Combined, it creates a more robust process that saves businesses and consumers money, eliminates waste of excess inventory, foresees potential shortages, and does it all quickly.[8]

# 3 Research Methodology

3.1 Study literature review about the service agile Supply chain information system model for ASEAN

University Network Quality Assurance at institution level.

- 3.2. Design the service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level.
- 3.3. The model is presented to advisor for consideration.
- 3.4. Create a tool for assessing the model.
- 3.5 The model is submitted to the experts for review and evaluate suitability..
- 3.6 Analyze the output data by using 5-point Likert Scale

#### 4 Results

4.1 The study results about the service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level were presented in figure 1

# 4.2 The study method about the service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level.

# 1 Suppliers /services

The supplier is a person or business that provides a product to another entity. The role of supplier in a higher education is to provide high-quality products from a manufacturer at a good price to a distributor or retailer for resale. A supplier in a higher education is someone who acts as an intermediary between the manufacturer and

retailer, ensuring that communication is forthcoming and stock is of sufficient quality. 2 University

A service provider is a university .It performs the duty to transform raw materials into the finished products. A service provider will perform its duty of product development and assessment .It is based on the consideration that all supply chain tasks and activities.

#### 3 Customer

Customers mean finished product from the university

#### 4. Consumers

The consumers mean entrepreneurs or the end-of-process component of the model. They include the society in general and entrepreneurs who sended finished product from the university. Finally, the end product of product will add value of enterprises and increase satisfaction of consumers. [1],[2],[3],[4],[5],[6].

**Table 2:** Results of appropriateness evaluation about the service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level.

No.	Items	$\overline{\overline{X}}$	S.D.	Suitability
1	Main elements	3.62	0.50	High
2	Suppliers /services	3.70	0.48	High
4	University	3.72	0.46	High
5	Customers	3.72	0.64	High
6	Consumers	3.63	0.67	High
•	Total	3.68	0.55	High

From table 2, that ten experts found that the service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level is highly appropriate ( $\overline{X}$  = 3.68, S.D. = 0.55).

#### 5. Conclusion

According to evaluation the service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level is considered to be high appropriate ( $\overline{X} = 3.68$ , S.D. = 0.55), and the design was corresponds to the research of Chansamut and Piriyasurawong has studied supply chain and information system about educational [1] In addition, with the study of chansamut suggesting that supply chain and information system also. [2],[3],[4],[5],[6]

#### 6. Discussion

The service agile Supply chain information system model for ASEAN University Network Quality Assurance is considered to be high appropriate ( $\overline{X}$  = 3.68, S.D. = 0.55) and can be appropriately applied in actual work settings.

#### 7. Recommendation

The service agile Supply chain information system model for ASEAN University Network Quality Assurance at institution level is considered to be high appropriate if possible it should be implemented in university.

#### 8. Acknowledgements

The research is helped by expert from university in Thailand.
